CITIZENS' VIEWS AND EXPERIENCES OF CORRUPTION

Transparency International is a global movement with one vision: a world in which government, business, civil society and the daily lives of people are free of corruption. With more than 100 chapters worldwide and an international secretariat in Berlin, we are leading the fight against corruption to turn this vision into reality.

EXECUTIVE SUMMARY

Despite varying widely from single island states to archipelagos of hundreds of tropical atolls and islands, Pacific countries have much in common. Many share a reliance on natural resources, relatively small populations, a remoteness from major global markets and a vulnerability to external shocks.

photo: Kara Math / Shutterstock.com

Eight of the ten countries and territories* surveyed in this *Global Corruption Barometer – Pacific* are sovereign nations and young democracies, having achieved independence between the 1960s and the early 1980s. As a result, governance structures and political institutions are still relatively new and overlaid on traditional systems. Several countries also experience ongoing instability. These factors create a range of corruption risks.

Following decisive measures to contain the COVID-19 pandemic in 2020, the first significant outbreaks only reached the region during 2021. However, critics are already warning that the crisis has been used by some governments to limit freedoms,¹ and allegations of corruption have been made in the procurement of emergency supplies and the disbursement of relief funds.²

Many citizens experience corruption directly, with our survey revealing high levels of

bribery, sexual extortion and vote-buying.

A majority of respondents feel corruption is a big problem in both the business sector and government, particularly among parliamentarians and officials in heads of government's offices. It also appears that authorities are failing to properly control resource extraction companies.

But change is possible. Most Pacific Islanders we spoke to support their government's anti-corruption measures and believe that ordinary people can help stop corruption. This aligns with the "Blue Pacific" narrative, which speaks of the collective potential of the region's shared stewardship of the Pacific Ocean. Meaningfully involving citizens will be essential if the region is to successfully implement the wide range of transparency and good governance commitments made by its leaders.³

*For stylistic or space reasons, in some places this report refers to "countries" instead of "countries and territories".

The survey

When it comes to corruption, Pacific countries and territories have remained among the most under-studied in the world.⁴ This gap has not deterred those fighting for greater transparency and accountability, but it has made their work significantly more difficult.

The *Global Corruption Barometer (GCB) – Pacific*, published by Transparency International, presents the most extensive set of public opinion data on perceptions and experiences of corruption in the region. In many of these countries and territories, the survey constitutes the very first attempt to gather this type of data.

Based on fieldwork conducted between February and March

2021, the GCB surveyed more than 6,000 people in 10 Pacific countries: the Federated States of Micronesia, Fiji, French Polynesia, Kiribati, New Caledonia, Papua New Guinea, Samoa, Solomon Islands, Tonga and Vanuatu. The survey covered adult men and women of all ages and socio-economic backgrounds, using quota sampling based on national population parameters.

The results show that a majority of respondents think corruption is a problem in both the public and the private sectors, despite government efforts to control it.

The GCB found that almost one in three respondents who accessed public services such as health care and education in the preceding year paid a bribe. Forty-six per cent called

in favours or used personal connections.

Our analysis shows that even though women tend to have more ongoing contact with services such as health care and education, it is men who are slightly more likely to rely on corruption when accessing public services.

Despite these findings, the results show reason for hope. A majority of the people interviewed believe that governments in the region are doing a good job tackling corruption. What is more, 71 per cent of people think that citizens can help stop corruption.

KEY FINDINGS

01

Corruption is a problem in both government and business

According to 61 per cent of respondents, corruption in government is a significant problem, and 56 per cent think this is also true for business. Many think corruption increased in both in the past year.

02

Government-business relationships lack integrity

Over two thirds of respondents think that businesses use bribes and connections to obtain profitable government contracts. Almost half think there is little control over the companies and individuals who extract natural resources.

03

Corrupt officials often go unpunished

Around a third of people surveyed believe that most parliamentarians and officials in heads of government's offices are corrupt. Forty-three per cent think that corrupt officials never or rarely face consequences.

04

Corruption in public services is common

Almost a third of those who accessed public services paid a bribe in the previous year, but only 13 per cent of them reported the incident to the authorities. Nearly half used personal connections when dealing with public services.

05

Uneven access to public services drives corruption

Overcoming bureaucratic hurdles and speeding up processes were the most common reasons given for bribery. Thirty-seven per cent also feel that if a powerful person helps them, they should reciprocate through gifts or votes.

06

Political integrity is low, especially around elections

Around a quarter of respondents have been offered a bribe for their votes and 15 per cent received threats of retaliation if they did not vote in a specific way.

07

Sexual extortion – or “sextortion” – is a very concerning issue

Over 40 per cent of respondents believe sextortion happens at least occasionally. While country results vary greatly, 38 per cent across the region say they or someone they know has experienced sextortion in the last five years.

08

Governments' anti-corruption efforts have support

Against this backdrop, more than 60 per cent of people surveyed think their government is doing a good job at fighting corruption. Only 14 per cent feel their government regularly takes their views into account when making decisions.

09

Citizens can help stop corruption

Over 70 per cent of respondents think that ordinary people can make a difference in the fight against corruption.

Recommendations

High levels of corruption and low levels of trust in some key institutions point to an immediate and pressing need for reform. Although appropriate responses will vary by country, key measures that governments should consider include:

1. INCREASE ACCOUNTABILITY OF POLITICAL DECISION-MAKERS

- + Strengthen requirements for officials to publicly disclose their income and assets, along with mechanisms to identify and monitor potential conflicts of interest.
- + Improve accountability in the use of discretionary public funds.
- + Ensure that law enforcement and the judiciary are equipped and empowered to sanction high-level corruption.

2. ENSURE INTEGRITY IN RELATIONSHIPS BETWEEN THE PUBLIC AND PRIVATE SECTORS

- + Regulate business involvement in electoral campaigns and policymaking, to prevent regulatory and state capture.
- + Ensure that public contracting processes are fair, transparent and competitive from beginning to end.

3. IMPROVE ACCESS TO PUBLIC SERVICES

- + Cut down opportunities for bribe-seeking, by streamlining processes.
- + Reduce misconceptions about the costs and timelines associated with accessing public services by providing clear information to all.
- + Ensure specifically that vulnerable groups can access public services with ease.

4. SAFEGUARD FREE AND FAIR ELECTIONS

- + Strengthen independent electoral commissions and anti-corruption agencies to prevent and sanction vote-buying.
- + Ensure that all citizens can exercise their right to vote without fear of retaliation.

5. GUARANTEE THE RIGHT TO INFORMATION AND FREEDOM OF EXPRESSION

- + Establish and effectively implement “right to information” laws to ensure that citizens, journalists and civil society have access to relevant public information.
- + Establish and effectively implement whistleblower legislation and mechanisms to protect those who expose corruption from censorship or retaliation.

6. ENGAGE WITH COMMUNITIES TO DRIVE REFORMS

- + Collaborate with the region’s gender equality movement to further investigate and address issues such as sextortion and other gendered forms of corruption.
- + Ensure community participation in policy, budget, and project development and implementation.
- + Support independent monitoring of public contracting projects by affected communities and civil society.

WHAT DO PEOPLE THINK ABOUT CORRUPTION?

We asked people what they thought about the state of corruption in their country: how prevalent it is, whether it is rising or declining and whether their government is doing enough to control it. Here's what we found.

Corruption a significant problem in government

When asked whether corruption in government is a problem in their country, a majority of respondents (61 per cent) feel it is either a "fairly big" or a "very big" problem. Only around a third of respondents

in the region (34 per cent) feel otherwise. These views are shared by men and women at almost identical levels.

The results from Papua New Guinea and Solomon Islands are particularly concerning. In these two countries, almost all respondents (over 95 per

cent) believe that corruption in government is a big problem. At the other end of the scale are French Polynesia and New Caledonia, where less than 20 per cent of respondents see corruption as a big problem in their governments.

61%

THINK GOVERNMENT CORRUPTION IS A BIG PROBLEM

34%

THINK GOVERNMENT CORRUPTION IS NO PROBLEM OR A SMALL PROBLEM

GOVERNMENT CORRUPTION, BY COUNTRY

Percentage of people who think corruption in government is a big problem.⁵

Almost half of respondents in the region (49 per cent) think that public servants commonly influence a hiring decision in their departments to favour a friend or a family member. This is highest in French Polynesia (84 per cent), Solomon Islands (74 per cent) and Papua New Guinea (68 per cent).⁶ In Kiribati, Samoa and Fiji, the practice was

reported as least frequent, but even in these countries over a quarter of people interviewed thought nepotism was a frequent occurrence when hiring in the public sector.

⁵For space reasons, in this report the Federated States of Micronesia will often be referred to as FSM.

Corruption in business also a concern

Corruption is not just a public-sector issue in the region. Fifty-six per cent of respondents also see corruption as a big problem in their country's business sector.

Yet there are big differences between countries. Papua New Guinea and Solomon Islands again show the highest perceptions of corruption in the business sector, with more than eight in ten respondents saying that corruption was a big or a very big problem. New Caledonia and French Polynesia

again show the lowest proportion of respondents thinking that corruption is a big problem in the private sector. However, the high number of people in these countries without an opinion on the issue could point to the need for further information and community-based dialogues.

THINK CORRUPTION IS **NO PROBLEM** OR A **SMALL PROBLEM** IN THE BUSINESS SECTOR

PRIVATE-SECTOR CORRUPTION, BY COUNTRY

Percentage of people who think corruption in the business sector is a big problem.⁷

photo: Joe Benning / Shutterstock.com

Close ties between business and politics?

A country's public and private sectors do not operate in isolation. Businesses deliver goods and services for the government. Similarly, economic policies enacted by the government – including taxation, subsidies and sector-specific

regulations – have a direct impact on the business community. When the ties between the business community and the government are not transparent, the line separating public and private interests might become blurred and governments may favour the narrow interests of those groups with more economic power.

The survey results show that people in the region are concerned about the relationship between business and government.

68%

THINK THAT BUSINESSES RELY ON MONEY OR CONNECTIONS TO OBTAIN GOVERNMENT CONTRACTS

40%

THINK THAT THE GOVERNMENT IS OFTEN RUN BY A FEW BIG INTERESTS

Almost seven in ten respondents (68 per cent) think that businesses rely at least occasionally on bribes and connections to obtain profitable government contracts.⁸ The proportion of respondents voicing this opinion is particularly high in Solomon Islands (91 per cent), the Federated States of Micronesia (82 per cent), Papua New Guinea (76 per cent) and French Polynesia (75 per cent). Most respondents in all countries except Samoa and

New Caledonia think that bribery and connections are a common way for businesses to secure government contracts.

Given these results, it is not surprising that 40 per cent of respondents across the region think that the government is often controlled by a few big interests. This concern is especially widespread among respondents from French Polynesia (80 per cent) and Solomon Islands (63 per cent).⁹

Additionally, almost half the respondents in the region (47 per cent) say that there is little control and oversight of the people and companies extracting natural resources.¹⁰ This figure includes a majority of respondents in Kiribati (67 per cent), Fiji (60 per cent), Vanuatu (59 per cent), Papua New Guinea (50 per cent) and Solomon Islands (50 per cent).

47%

**THINK THERE IS LITTLE CONTROL
OVER THOSE WHO EXTRACT
NATURAL RESOURCES**

26%

**THINK THAT MOST OR ALL PEOPLE
WORKING FOR COMPANIES IN THE
EXTRACTIVE SECTOR ARE CORRUPT**

A sector ripe for exploitation: Solomon Islands in focus

Significant endowments of natural resources have made Pacific countries attractive to foreign-owned companies, particularly Chinese firms.¹¹ In some industries, it is estimated that Pacific communities receive less than 12 per cent of the final value of the resources extracted.¹²

Corruption risks in this sector are high. Across the region, transnational criminal groups use corruption to exploit natural resources such as forests, fish stocks, and gold and manganese deposits. Common tactics include bribery and capture of environmental law enforcement bodies,¹³ often involving high-level politicians, government officials and private-sector leaders and intermediaries, who may act with impunity.¹⁴

In Solomon Islands – one of the largest exporters of tropical wood globally – many senior government leaders have held direct interests in logging concessions. There has been collusion between political leaders, public officials and the timber industry, with recent cases implicating senior officials and politicians.¹⁵

This makes it unsurprising that a majority of respondents in the country think companies are corrupt (53 per cent) and use bribes or personal connections to secure profitable government contracts (60 per cent). Half of those surveyed (50 per cent) also believe there is limited oversight of extractive companies.

Positively, the government enacted the Anti-Corruption Act in 2018. A whistleblower protection act is also in place, but key oversight bodies remain poorly resourced,¹⁶ and filing and pursuing complaints is costly for ordinary people. These are challenges across several smaller Pacific countries with narrow economic bases.¹⁷

Transparency Solomon Islands has repeatedly voiced the need for adequate community consultation and due diligence before the government develops big projects or awards contracts and licences.¹⁸ This would help protect local communities from opaque deals, forced displacement and a loss of livelihoods. The government must also ensure that safe, effective and accessible channels are in place for communities to file complaints about abuses of power.

Corruption on the rise in the public and private sectors

As shown in the previous section, respondents in many countries across the region see corruption as a major problem, but they also see it as one that has worsened. A majority of respondents (56 per cent) think that levels of corruption increased in their country's government over the 12 months prior to the survey. Less than a fifth (17 per cent) think corruption decreased.

Two thirds of respondents (66 per cent) in Tonga and Solomon Islands think that levels of corruption in their governments had increased, followed by New Caledonia (62 per cent), Papua New Guinea (60 per cent) and the Federated States of Micronesia (60 per cent).

Unfortunately, there is no country in which a majority of people surveyed felt corruption in government had declined, but Samoa and Kiribati have the highest proportion of respondents with positive assessments (27 and 44 per cent respectively).

In terms of corruption trends in business, 45 per cent of respondents in the region think that corruption in the business sector increased over the 12 months prior to the survey. This view is shared by most people we talked to in Solomon Islands (63 per cent), the Federated States of Micronesia (59 per cent) and Tonga (55 per cent).

Support for government anti-corruption strategies

We also asked people how they rate their government's efforts at tackling corruption.

The results show that despite high perceptions of corruption, people appear to welcome their government's strategies against it. More than six in ten respondents (62 per cent) throughout the region think their government is doing a good job at controlling corruption.

62%

THINK THEIR GOVERNMENT IS DOING WELL

32%

THINK THEIR GOVERNMENT IS DOING A BAD JOB AT TACKLING CORRUPTION

However, the differences between countries are significant. A majority of people in eight countries are satisfied with the government's response against corruption, but elsewhere dissatisfaction is more prevalent. Over half of respondents in Solomon Islands (52 per cent) and the Federated States of Micronesia (51 per cent) think that their government is doing a bad job at keeping corruption in check.

These results could be linked to measures some governments have implemented, including passing anti-corruption legislation, developing national strategies and establishing independent anti-corruption commissions.

However, if such efforts are to effectively reduce corruption then challenges such as funding and capacity constraints need to be

addressed. In Solomon Islands, the independent anti-corruption commission established in 2018 remains under-funded and under-staffed.²¹ A review of the Kiribati watchdog unit established in 2016 within the Public Service Office also found that staff lack adequate skills and knowledge to carry out investigations.²²

GOVERNMENT PERFORMANCE, BY COUNTRY

Percentage of people who think their government is doing badly vs. well in tackling corruption.²³

Badly Well Don't know

Do corrupt actors face consequences?

While most survey respondents approved of government efforts to fight corruption, most also do not think that the justice systems in their countries are effectively prosecuting corrupt officials. Only two in ten respondents (18 per cent) believe that officials who engage in corruption frequently face consequences for their

actions. Furthermore, over four in ten (43 per cent) think that appropriate action against corrupt officials in their countries remains a rare phenomenon. This includes most respondents in Kiribati (50 per cent), Tonga (60 per cent) and French Polynesia (66 per cent), who say that corrupt officials never or only rarely face consequences for their actions.

CONSEQUENCES FOR CORRUPT OFFICIALS

Percentage of people who think public officials never or rarely face consequences for engaging in corruption.²⁴

photo: maloff / Shutterstock.com

Fighting corruption begins at the top: Kiribati in focus

In 2017, Kiribati developed its first national anti-corruption strategy. The president declared it a milestone in the country's history which would make Kiribati a regional anti-corruption champion.²⁵ Another positive step was Kiribati hosting the first Pacific Regional Anti-Corruption Conference in 2020, at which the "Teieniwa Vision" was developed – a set of collective anti-corruption aspirations from Pacific leaders, now officially adopted by the Pacific Islands Forum.²⁶

Respondents in Kiribati indicated some of the highest levels of trust towards key state and non-state institutions in the region, and there is strong satisfaction (83 per cent) with the government's steps to tackle corruption.

However, serious gaps remain. Bribery rates are the highest in the region (64 per cent) and there is widespread vote-buying (45 per cent).

Recommendations from reviews of Kiribati's progress under the United Nations Convention against Corruption need to be prioritised. These include strengthening key justice and oversight institutions, better protection for whistleblowers and raising awareness among communities about their rights and the responsibilities of duty bearers.²⁷

Like other small island countries with narrow economies, Kiribati has indicated that it lacks adequate financial and technical resources for reforms.²⁸ It needs support from regional organisations and development partners, but equally important will be Kiribati's government acting on its aspirations to fully implement and enforce an effective anti-corruption framework.

Heads of government's offices and members of parliament seen as most corrupt

We also asked people how much corruption they think there is across 13 different sectors and institutions in their country. In general, individuals within the executive and legislative branches of government were considered the most corrupt. Around a third of respondents across the region think that most or all members of parliament (36 per cent) and staff in the president's or prime minister's office (32 per cent) are involved in corruption.²⁹

There are, however, big differences between countries. In Kiribati, for example, 65 per cent of respondents think that most or all officials in the office of the president are involved in corruption. Forty-four per cent of respondents in French Polynesia agree. In contrast, only 10 per cent of people surveyed in Samoa and 12 per cent in Fiji think that most officials in the prime minister's office are involved in corruption.

The three countries with the highest perceptions of corruption in the executive also top the list when it comes to the legislative branch. More than half of respondents in Kiribati (64

per cent), Papua New Guinea (58 per cent) and Solomon Islands (55 per cent) think that most or all members of parliament are involved in corruption. Samoa (12 per cent) and Fiji (17 per cent) again reported the lowest perceptions of corruption in the legislature.

The police are also seen as a corruption hotspot in the Pacific. Twenty-nine per cent of respondents in the region reported that most or all members of the police in their country are involved in corruption. The highest figures were in Kiribati (63 per cent) and Papua New Guinea (57 per cent).

CORRUPTION, BY INSTITUTION

Percentage of people who think that most or all people in these groups or institutions are involved in corruption.³⁰

Trust in institutions to do a good job and act fairly

Overall, a majority of respondents across the region (58 per cent) reported having a fair amount or a great deal of trust in government to do a good job and treat people fairly. However, people are divided on this issue, as 41 per cent have little or no trust in their government. These results establish the government, including politicians, public agencies and public servants, as the least-trusted institution in the region.

There are, however, big differences across countries. A significant majority of respondents in Fiji (73 per cent), Samoa (78 per cent) and Kiribati (88 per cent) have a fair amount or a great deal of trust in their governments. In contrast, only around a quarter of respondents in New Caledonia (23 per cent) and French Polynesia (28 per cent) trust that the government will do a good job and act in a fair manner.

The most trusted group is religious institutions. Eighty-six per cent of respondents report having a fair amount or

a great deal of trust in religious leaders, with this figure even exceeding 90 per cent in Kiribati, Tonga and Solomon Islands. In Vanuatu, where religious institutions played a critical role in the country's independence movement,³¹ 89 per cent of respondents say they trust such institutions. Groups like these may be well positioned to play an important role in anti-corruption awareness campaigns at community level.

COVID-19 and government transparency

A majority of respondents in the region (54 per cent) felt that their governments had handled the COVID-19 pandemic in a transparent manner. This is a positive reflection on the early measures taken in 2020 by Pacific leaders to protect borders and contain the pandemic. However, the first significant outbreaks of the virus only reached Pacific Island nations in 2021 after this survey was conducted.

Civil society groups have increasingly raised corruption concerns related to COVID-19. There have been allegations that funds to alleviate the pandemic's economic impact in Solomon Islands were misused³² and that emergency funds disbursed in Papua New Guinea throughout 2020 lacked proper oversight.³³ Some governments have been accused of adopting authoritarian approaches to managing the crisis, such as the significant powers granted to Papua New Guinea's Prime Minister under the 2020 Public Health Emergency Act.³⁴ Concerns have also been raised about some governments limiting media freedom³⁵ and freedom of expression, such as the Vanuatu government's order that media outlets may only publish stories about the pandemic if they secure official authorisation.³⁶

With COVID-19 outbreaks continuing to hit the region, there is an urgent need to strengthen transparency and accountability mechanisms and respect for civic and political rights – both to better respond to this pandemic and any future crises.

TRUST IN INSTITUTIONS TO DO A GOOD JOB AND ACT FAIRLY

Percentage of respondents with a “fair amount” or a “great deal” of trust in the listed institutions.³⁷

photo: ChameleonsEye / Shutterstock.com

HOW ARE CITIZENS AFFECTED BY CORRUPTION?

We asked citizens in all countries about their personal experiences with corruption in accessing basic services, such as health care and education, to better understand what happens in people's daily lives. We found that bribery and the use of personal connections are widespread in many parts of the region, and across many key services.

BRIBERY RATES, BY COUNTRY

Percentage of public service users who paid a bribe in the previous 12 months.

Nearly a third of respondents paid a bribe

People were asked whether they had contact with six key public services in their country in the previous 12 months: a public school, a public clinic or hospital, a government office issuing official documents, public providers of water, sanitation or electric services, the police and the courts.³⁸ We then asked whether they paid a bribe, gave a gift or did a favour in order to receive the services they needed.³⁹ Eighty per cent of all respondents had contact with at least one of these six public services over the 12 months preceding the survey. Of these, more than one in three people (32 per cent) paid a bribe for basic services, such as health care or education.

This makes the incidence of bribery documented across this region higher than found by the Global Corruption Barometer in other regions, including Africa (28 per cent), the Middle East and North Africa (22 per cent), Latin America (21 per cent), Asia (19 per cent) and the European Union (7 per cent).

But bribery rates differ significantly from country to country. More than half of respondents who used at least one of the public services assessed in the survey paid a bribe in Kiribati (64 per cent), the Federated States of Micronesia (61 per cent) and Papua New Guinea (54 per cent). In contrast, Fiji maintains the lowest overall bribery rate (5 per cent), followed by French Polynesia (11 per cent).

photo: corners74 / Shutterstock.com

Bribery rates are high across key public services...

We found that experiences with bribery do not show significant variation across key services.⁴⁰

The lowest bribery levels were documented in interactions with public schools and clinics, but even for these services almost

a quarter of respondents (24 per cent) resorted to bribery. Somewhat higher bribery rates were found among respondents interacting with the police (27 per cent) or trying to obtain documents from a government office (29 per cent).

The survey results revealed that women are more likely to interact with public schools,

clinics and hospitals, while men are more likely to engage with the police and public offices in charge of issuing documents. Despite these different contact patterns, men are slightly more likely than women to pay a bribe when interacting with a public school.

BRIBERY RATES, BY SERVICE

Percentage of people who used public services and paid a bribe in the previous 12 months.

...but reporting rates are low

Despite the high incidence of bribery across the region, only around a tenth of respondents (13 per cent) who paid a bribe reported this to

the authorities.⁴¹ This rises to around 30 per cent in Fiji and Kiribati. Reporting levels are almost negligible in French Polynesia (4 per cent) and Solomon Islands (2 per cent) – the lowest rates in the region.

13%

OF PEOPLE WHO PAID A BRIBE REPORTED THIS TO THE AUTHORITIES

Corruption in law enforcement: Papua New Guinea in focus

While the police across the Pacific enjoy a relatively high level of trust (71 per cent), almost three in ten respondents (29 per cent) think that most or all people working for the police forces are corrupt. Police integrity appears to be a particular concern in Papua New Guinea, where 57 per cent of respondents see most or all people working for the police forces as corrupt, and only 46 per cent trust them to act responsibly.

In addition, 58 per cent of respondents in Papua New Guinea who had interactions with police in the previous 12 months reported paying a bribe, giving a gift or doing a favour, and 63 per cent called in favours or drew on personal connections to get assistance or avoid a problem. These numbers are far higher than the regional averages of 27 and 54 per cent respectively.

In 2011, Papua New Guinea's police commissioner asked that citizens stop offering bribes to police⁴² to avoid contributing to a culture of bribery. But this survey indicates that high percentages of public officials in the country still demand bribes. Seventeen per cent of respondents who paid a bribe for any public service were asked to do so – the second highest rate in the region – while 20 per cent said they paid because they knew it was expected.

Amid allegations of politically motivated police brutality⁴³ and violence,⁴⁴ as well as corruption and gun running,⁴⁵ Minister for Justice Bryan Kramer and Police Commissioner David Manning have both committed to meaningful police reform.⁴⁶ Weeding out so-called “criminals in uniform”⁴⁷ is a crucial start, but the police force remains critically under-funded, under-staffed and under-resourced⁴⁸ – as well as competing with a booming private security industry. Reforms must therefore go further if they are to restore public trust.⁴⁹

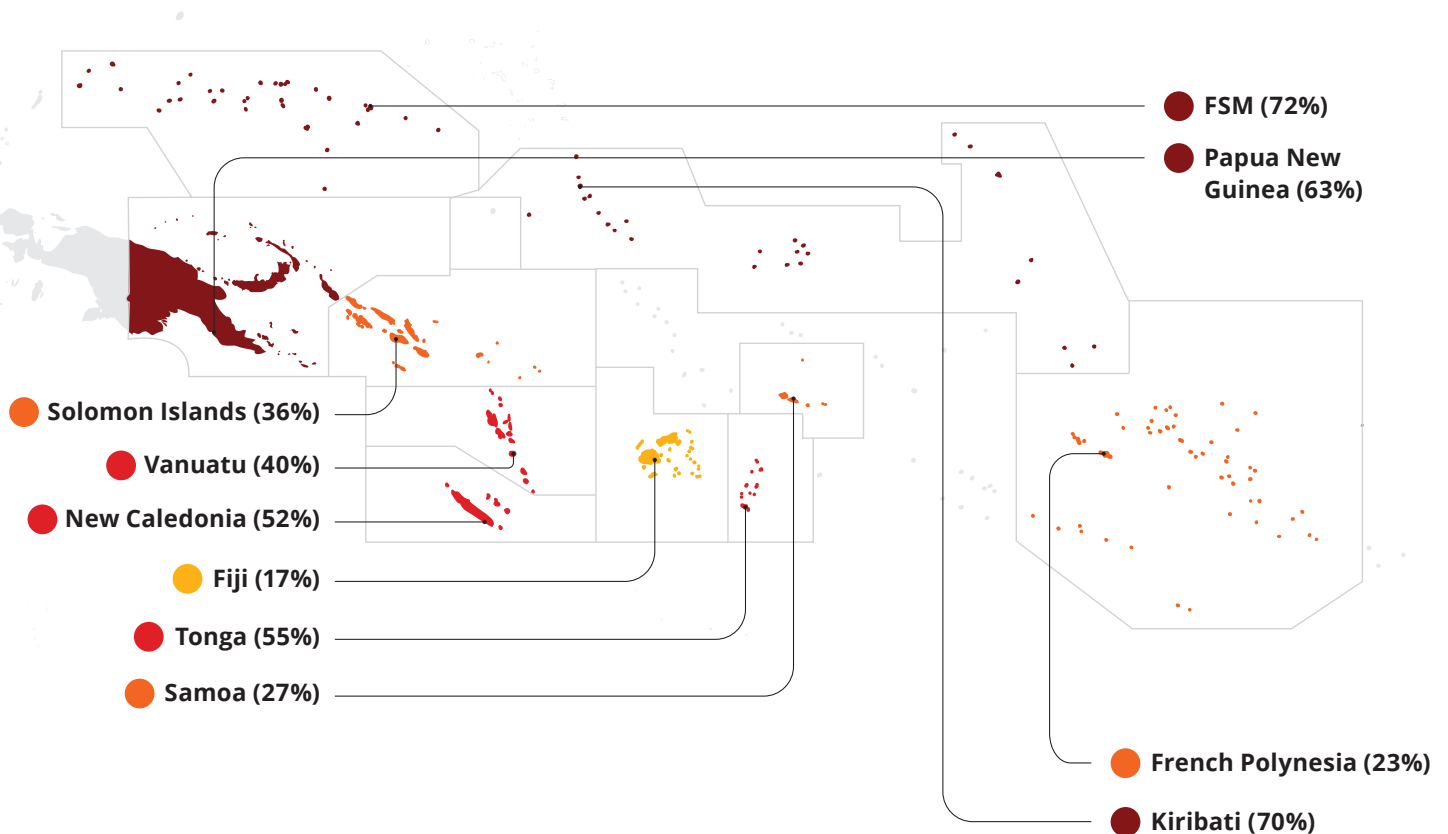

This involves building a culture of integrity, including aligning police conduct with provisions in the Police Act, as recommended in the 2021 National Integrity System Assessment,⁵⁰ and working with communities to improve the reporting of corruption. The authorities must also ensure that all reports are properly investigated and that meaningful sanctions are introduced and enforced.

Looking beyond bribery: the misuse of personal connections

Bribery is not the only form of corruption that people can experience when interacting with public services. Relying on personal connections is a form of favouritism that can introduce systematic biases in how public services operate and which groups are able to use them.

Given the small populations of many Pacific Island nations, ties to government officials and civil servants are relatively common. However, governments in the region must guarantee fair and equal access to public services to all citizens, regardless of who they are and who they know. For this reason, we asked people whether they relied on personal connections to access services from the government.

The results suggest that this form of favouritism is also widespread across the region. Almost half of respondents (46 per cent) who had contact with one of the six public services included in the survey relied on personal connections at least once to get what they needed.

PERSONAL CONNECTION RATES, BY COUNTRY

Percentage of public service users who used personal connections or called in personal favours in the previous 12 months.⁵¹

However, there are big differences among the countries in the region. In five countries – New Caledonia (52 per cent), Tonga (55 per cent), Papua New Guinea (63 per cent), Kiribati (70 per cent) and the Federated States of Micronesia (72 per cent) – more than half of public service users relied on personal connections to get what they

needed. Yet in Fiji, fewer than two in ten (17 per cent) did so.

Mirroring the bribery rates, the use of personal connections appears widespread across all public services, with only marginal differences found. The highest use of personal connections was for interactions with the police and the issuing of government

documents (both 39 per cent). There was little difference between the rates at which men and women use personal connections when interacting with public services. As with the bribery findings, men were slightly more likely than women to report calling in favours when interacting with public schools.

USE OF PERSONAL CONNECTIONS, BY SERVICE

Percentage of people who used personal connections in the previous 12 months.

Why do people rely on corruption to access public services?

There are many reasons why corruption may occur when people seek public services. It is often assumed that public officials abuse their positions and opportunities to act in a discretionary manner to create situations that allow them to supplement their income by extorting bribes from public service users.

However, the data gathered in the Pacific region shows this is not necessarily the main driver of bribery among respondents. Less than a third (30 per cent) of public service users who paid a bribe confirm that they were either asked to pay to receive the service they needed (11 per cent), knew that a bribe was expected even if not explicitly requested (18 per cent), or feared negative consequences for not paying a bribe (1 per cent).⁵²

Instead, a majority of survey respondents who reported paying a bribe (56 per cent) say that they were not requested to do so, but wanted either to speed up the process (30 per cent), get a better service (18 per cent) or simply express gratitude (9 per cent). These results suggest that bribery in the region is mostly used as a tool to get around complex or time-consuming bureaucratic processes.

REASONS WHY PEOPLE PAY BRIBES TO RECEIVE PUBLIC SERVICES

Percentage of people who pay bribes, by reason.

*In total, 29.6 per cent paid a bribe for a quicker service and 17.6 per cent for a better service.

When it comes to the use of personal connections, the survey results paint a similar picture. Almost two-thirds of respondents (63 per cent) say that they relied on connections either to get a better service than usually offered (22 per cent) or to get things done quicker (41 per cent). However, around a fifth of respondents who used a public service (19 per cent) say they would not have received what

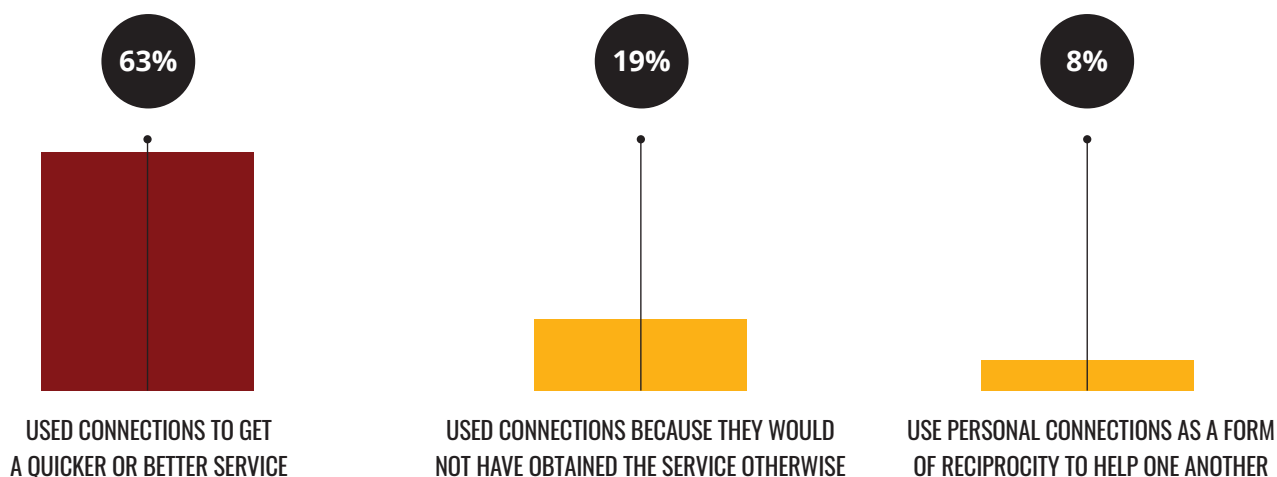

they needed without the help of their personal connections. Around a tenth of respondents (8 per cent) say that using personal connections was a way of showing reciprocity and helping one another.⁵³

These results suggest that rates for paying bribes and using personal connections could be reduced by simplifying the procedures for accessing

public services, and providing citizens with clear information about the costs and expected timelines involved.⁵⁴

REASONS WHY PEOPLE USE PERSONAL CONNECTIONS TO RECEIVE PUBLIC SERVICES

Percentage of people who use personal connections, by reason.

The role of reciprocity

We asked people whether they feel they should give a gift or political support to people in positions of power who help them. The results show that respondents across the region are divided on this issue. While 37 per cent agree with the statement, 41 per cent disagree.

Attitudes also vary significantly by country, from just 8 per cent of respondents in New Caledonia feeling they should reciprocate when a person in a position of power does something to help them, to 51 per cent in Vanuatu and 80 per cent in Kiribati sharing the same view.

In six of the ten countries covered, more people think that gift-giving is not necessary in such situations than those who do. This includes most respondents in Solomon Islands (51 per cent), Fiji (55 per cent), French Polynesia (57 per cent), New Caledonia (60 per cent), and the Federated States of Micronesia (62 per cent).

ATTITUDES ON RECIPROCITY, BY COUNTRY

Percentage of people who agree that if someone in a position of responsibility helps them, they should show their appreciation through a gift or their political support.⁵⁵

Gift-giving and reciprocity are complex issues when viewed within the context of the Pacific public sector.⁵⁶ People with power can exploit close social ties and gift-giving traditions as a cover for bribery, including during elections. Key to determining when the line is crossed is often the degree of secrecy in

which these gifts or favours are exchanged, and the level of obligation they imply.⁵⁷

Campaigns that empower communities with knowledge about their rights and the obligations of public officials could prevent cultural practices and other socio-economic

vulnerabilities being exploited by corrupt public officials and others for personal gain. Clear election campaign rules, donation policies and gift registries, as well as increased accountability for discretionary funds, help improve oversight of these practices.

SEXTORTION

This tenth edition of the *Global Corruption Barometer* has documented the issue of sexual extortion – or sextortion – across different regions of the world.*

In this specific manifestation of corruption, sex becomes the currency of the bribe and people are coerced into engaging in sexual acts in exchange for

essential services, including health care and education. Globally, girls and women are overwhelmingly targeted for sextortion.⁵⁸

38%

**OF PEOPLE SURVEYED HAVE EXPERIENCED
SEXTORTION OR KNOW SOMEONE WHO HAS**

42%

**THINK THAT SEXTORTION HAPPENS
AT LEAST OCCASIONALLY**

*Though multiple editions of the *Global Corruption Barometer* have been conducted elsewhere, this report represents the first time it has been carried out in the Pacific

Our results show that almost four in ten respondents across the region (38 per cent) have received requests from public officials that are sexual in nature in exchange for government services or benefits at least once in the past five years, or know someone who has. The highest rate was reported in French Polynesia, where an alarming 92 per cent of respondents express having experienced this form of corruption themselves or knowing someone who has. Extremely high rates of sextortion were also reported in New Caledonia (76 per cent) and Papua New Guinea (51 per cent). Much lower rates were found

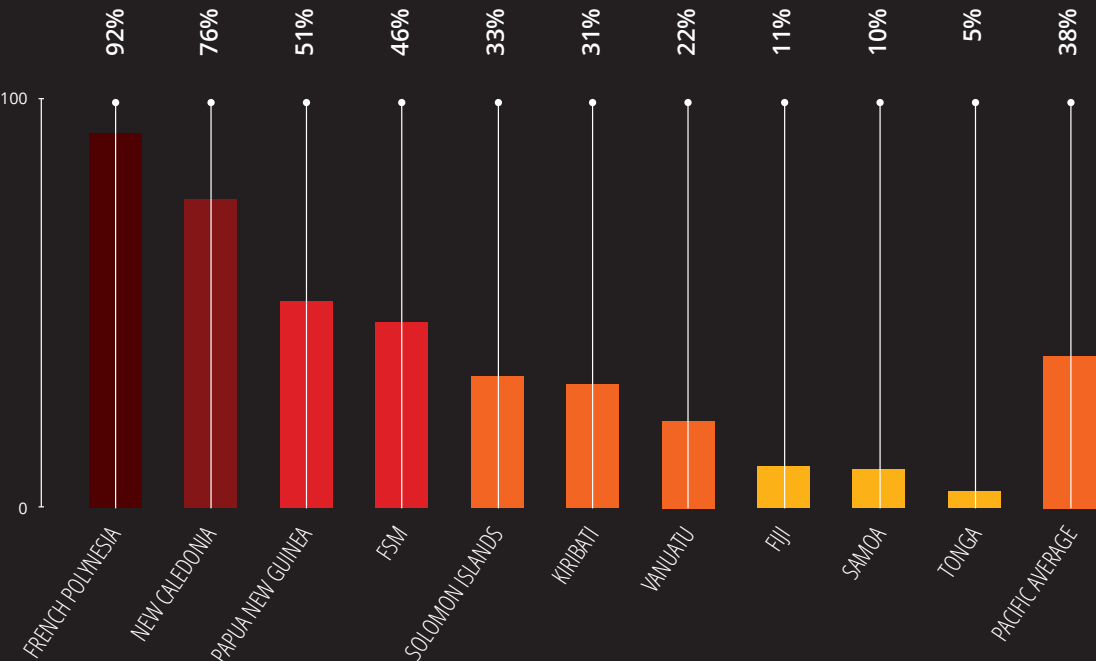

in Fiji (11 per cent), Samoa (10 per cent) and Tonga (5 per cent). The high regional average aligns with the high rates of sexual and gender-based violence recorded in the region,⁵⁹ which far exceed the global average.⁶⁰

Despite these findings, respondents across the Pacific appear to have difficulty assessing the extent of the problem. Only 21 per cent think that sextortion happens often, while 37 per cent think it happens rarely or occasionally and 24 per cent think it never happens.⁶¹

It is worth noting that around a fifth of respondents (17 per cent) say that they do not know how often sextortion occurs in their countries. These figures rise to half of all respondents in New Caledonia (50 per cent) and over 40 per cent in French Polynesia. While this contrasts with the high levels of direct and indirect sextortion reported in the survey, it could point to a need for further investigation and community dialogue to better understand and address this heinous form of corruption.

SEXTORTION RATES, BY COUNTRY

Percentage of people who experience sextortion or know someone who has.⁶²

CORRUPTION IN ELECTORAL PROCESSES COULD BE UNDERMINING DEMOCRACY

Elections can be a mechanism for citizens to hold power to account by voting out corrupt politicians. However, this can only happen if electoral processes are free and fair. Limiting forms of electoral corruption such as vote-buying is crucial, as is strengthening electoral commissions and the monitoring and enforcement of campaign rules.

Around a quarter of people surveyed across the region (26 per cent) reported being offered bribes in exchange for their votes in national, regional or local elections in the past five years. Almost three in ten respondents (29 per cent) mentioned that other members of their family or clan had a similar experience over the same period.⁶³ Vote-buying appears to be especially

widespread in Papua New Guinea and the Federated States of Micronesia, where almost 60 per cent of respondents reported having been offered a bribe in exchange for their vote at least once. The lowest rates of vote-buying were reported by respondents in Tonga (3 per cent), Fiji (4 per cent) and New Caledonia (6 per cent).

26%

OF RESPONDENTS WERE
OFFERED BRIBES IN
EXCHANGE FOR VOTES
AT LEAST ONCE IN THE
PAST FIVE YEARS

15%

OF RESPONDENTS WERE
THREATENED WITH
RETALIATION IF THEY
DID NOT VOTE IN A
PARTICULAR WAY

In some countries, people are also threatened with retaliation if they do not vote in a certain way. Around a fifth of survey respondents in Kiribati (23 per cent) and Solomon Islands (19 per cent) and almost four in ten (39

per cent) in Papua New Guinea and the Federated States of Micronesia reported having been threatened to vote in a certain way at least once in the past five years.⁶⁴ This practice is least widespread in Fiji, New Caledonia,

Samoa and Tonga, where less than 5 per cent of respondents reported experiencing such threats. Fifteen per cent of respondents across the Pacific have been threatened so that they vote in a certain way.

VOTE-BUYING RATES, BY COUNTRY

Percentage of people offered bribes in exchange for votes in the past five years.⁶⁵

Topic in focus: Vote buying

Free and fair elections are an issue to watch across the region. Although regular elections take place in all the countries surveyed, they are marred in some countries by irregularities, fraud or violence.⁶⁶ Members of parliament and government officials in some Pacific countries have access to large discretionary funds for their constituencies, which can be abused in an attempt to buy votes. In Solomon Islands, two members of parliament lost their seats in 2020 after they were convicted by the high court for bribing voters during the 2019 national elections.⁶⁷ Despite being against the law, widespread vote-buying has been reported in Kiribati, Papua New Guinea and Solomon Islands⁶⁸ – and confirmed by survey respondents in those countries.

With national elections recently concluded in some Pacific countries, and others scheduled to take place soon, the views and experiences expressed in this report provide these new governments with an opportunity to listen to their citizens and position themselves as anti-corruption champions from the outset.

Concrete steps that leaders could take to strengthen integrity and democracy in their countries include enforcing electoral laws, providing voter education, increasing transparency of election-related data and protecting press freedom. They should also ensure that national anti-corruption agencies have the resources and mandate to operate effectively. One positive initiative is the Resource Centre announced by the Fijian Electoral Office to provide public access to historic electoral information, along with a virtual voter education platform.⁶⁹

TAKING ACTION

Social demand for accountability and good governance is crucial for keeping corruption in check. Engaged and informed citizens can demand more from their governments and hold them to account, particularly in democratic settings. The results of the *Global Corruption Barometer – Pacific* reveal that while there is much room for improvement in the region when it comes to ensuring citizens' participation and governments' responsiveness to their needs, there is cause for hope.

ORDINARY PEOPLE CAN MAKE A DIFFERENCE IN THE FIGHT AGAINST CORRUPTION

Percentage of people who agree.⁷⁰

photo: Transparency International Papua New Guinea

People reject corruption and see themselves as part of the solution

The survey results show that a majority of respondents in the region (60 per cent) think that corruption by government officials is not acceptable under any circumstances.⁷¹ In French Polynesia and Tonga, this rose to around three quarters of respondents. Yet a sizeable minority (23 per cent) feel that government corruption can be justified if it delivers good results.

Positively, 71 per cent of respondents agree that ordinary people can make a difference in the fight against corruption. This opinion is particularly widespread among respondents from Fiji, Solomon Islands and Vanuatu, where more than 80 per cent share the view that people are part of the solution to corruption.

71%

THINK ORDINARY PEOPLE **CAN** MAKE A DIFFERENCE IN THE FIGHT AGAINST CORRUPTION

11%

THINK ORDINARY PEOPLE **CAN'T** MAKE A DIFFERENCE IN THE FIGHT AGAINST CORRUPTION

People making a difference: Fiji in focus

Since 2018, Fiji has been one of the few Pacific countries with a specific right to information law.⁷² The Independent Commission against Corruption supports the reporting of corrupt acts and whistleblower protection⁷³ and the government publishes budget information and conducts extensive budget consultations.⁷⁴ Survey respondents in Fiji also reported the lowest levels of bribery in the region.

But there have been reports of increasing harassment, arrest and detention of critics. Laws provide the government with direct oversight of the media and the ability to levy heavy penalties against critics, fostering a climate of fear and self-censorship and limiting press freedom. There has been substantial interference with the right to peaceful assembly.⁷⁵ The government's response to the COVID-19 pandemic has appeared to follow a similar trend. While 78 per cent of respondents thought that the government handled the pandemic in a transparent manner, this data was gathered before the first severe outbreak hit the country. Concerns have since been raised about an increasingly authoritarian response to the crisis.⁷⁶

The good news is that 83 per cent of respondents think ordinary people can make a difference in the fight against corruption. These findings are in line with those from our previous survey in 2013, which showed that Fijians are highly engaged in anti-corruption work.⁷⁷

Both in Fiji and regionally, young people have proved particularly passionate about the fight for transparency and accountability.⁷⁸ Our partner Youth for Integrity – a programme led by young Fijians – runs digital campaigns against corruption. In 2021, it joined with other civil society organisations to successfully lobby for the postponement of a new bill granting police additional and potentially problematic powers, until proper public consultations are undertaken.⁷⁹

People do not feel heard by their governments

While the survey shows strong support for citizen action and government efforts to tackle corruption, only 14 per cent of respondents across the region feel that the government regularly takes their views into account when making decisions. Although almost a quarter of respondents in Papua New Guinea (23 per cent) and Samoa (24 per cent) feel that their government frequently takes them into account when making decisions, only 9 per cent in Solomon Islands and 7 per cent in French Polynesia agree.

The fact that more than three quarters of respondents feel their voices are not regularly being heard by those in power presents an important challenge for democracies in the region, particularly given the previously mentioned finding that 40 per cent think their governments are often controlled by narrow interest groups.

Other data from the region shows that women are particularly underrepresented in public decision-making. Pacific Island countries have the lowest level of female representation in politics in the world. Papua New Guinea, Vanuatu and the Federated States

of Micronesia have no female politicians at all, making them three out of only four countries globally with such a lack of political representation.⁸⁰

However, there are ways for Pacific leaders to harness the hope and confidence expressed by ordinary people in this survey. These include providing opportunities for citizens to engage in public decisions, strengthening access to information and making the policymaking process more transparent, so people can see how government actions align with the public interest.

INCLUSIVE DECISION-MAKING, BY COUNTRY

Percentage of people who think their government frequently takes their views into account.⁸¹

The importance of engaging communities: Vanuatu in focus

Encompassing more than 80 islands, and home to a highly culturally and linguistically diverse population, Vanuatu faces several unique governance challenges. The country is also considered the most exposed to natural disasters in the world⁸² – a situation which will only be exacerbated by climate change.⁸³ Since independence, the political landscape has been marked by significant instability, including frequent scandals⁸⁴ and changes in government.⁸⁵

Empowering citizens to hold their government to account is crucial if the country is to face these challenges. However, only 11 per cent of our survey respondents feel that the government frequently takes their views into account, and Vanuatu is one of only a handful of countries without a single female member of parliament.⁸⁶ Despite a well-received right to information (RTI) law passed in 2016,⁸⁷ the RTI Unit is still without a commissioner, and key positions in other public offices apparently remain unfilled.⁸⁸ Critics also warn that provisions introduced in 2021 criminalising defamation will have a “chilling effect” on freedom of speech and media freedom.⁸⁹

Although 74 per cent of Ni-Vanuatu citizens live in rural areas,⁹⁰ the reach of the state remains relatively weak outside urban centres.⁹¹ The government could address this gap through stronger collaboration with civil society organisations which already engage regularly with communities across the country, both online and in person. Transparency Vanuatu, for example, conducts outreach trips to help citizens understand their rights and the duties of those in power, sometimes in partnership with the RTI Unit. The high proportion of respondents who report receiving their news via radio (42 per cent) and social media (33 per cent) offers an excellent opportunity for politicians to easily and affordably begin dialogues with their constituents.

CONCLUSION

The *Global Corruption Barometer (GCB) – Pacific* represents the first systematic attempt to gather data on the perceptions, attitudes and experiences of corruption among people in the region. Now, decisive actions are needed to advance anti-corruption efforts in the region. Support from governments, donors and other key stakeholders will be crucial to make this possible.

The results show that bribery affects almost one in three people, and that corruption in both government and the business sector is seen as a big problem. While levels of corruption vary widely between individual countries, the overall picture is very concerning. Additionally, the region shows some of the highest rates of sextortion documented so far by any GCB.

Corruption in the Pacific is not limited to the delivery of public services. In most countries we surveyed, over a fifth of respondents were targeted for vote-buying. Efforts to improve the integrity of elections are especially necessary in those countries where corruption in public service delivery also appears most widespread.

The high number of people who directly experience corruption in its many forms shows that institutions need to be strengthened. A whole-society approach to anti-corruption that ensures meaningful engagement by civil society is vital for achieving this goal. This will

require raising awareness of the damaging effects of corruption, informing citizens about their rights and the responsibilities of civil servants, and simplifying bureaucratic processes. It is also important to improve the quality and availability of reporting channels, and strengthen the prosecution of abuses of power.

People in the Pacific also appear to be very worried about the relationship between the business sector and their governments, with public contracting portrayed as a potential corruption hotspot across the region. Only a minority of respondents across all 10 countries covered in the survey think that corruption is a rare occurrence in the process of awarding public contracts. People surveyed were also more likely to think that their governments respond to the interests of a few powerful groups rather than the needs of ordinary citizens. A more transparent relationship between business and governments is therefore essential. Regulating business involvement in electoral

campaigns and policymaking, and introducing income, asset and interest disclosure for politicians, would be first steps in the right direction, strengthening citizens' ability to hold their leaders to account.

Achieving sustainable wins in the fight against corruption can be a slow and painstaking process. Fortunately, people are optimistic about the change they can effect, and many approve of their government's anti-corruption efforts. Leaders now have an opportunity to translate the views and experiences of Pacific Islanders captured in this report into stronger action on the commitments they have made – nationally, regionally and globally.

As regional leaders finalise the 2050 Strategy for the Blue Pacific, they have an opportunity to prioritise strong governance, accountability and community engagement in order to ensure just, equitable and sustainable development across the region.

METHODOLOGY

The survey targeted the general population aged 18 and older in 10 countries across the Pacific. The researchers reached respondents via computer-assisted telephone interviews (CATI) using random digit dialling sample generation.

The samples for the countries covered with the CATI methodology were based on interlocked quotas by region, age and gender. Respondent selection was carried out on a random basis using the Kish grid methodology, taking into consideration all adults in the household who did not have a mobile phone of their own. This was done to ensure that all adults within the household had an equal opportunity to be interviewed. The Pacific region presents several challenges for primary data collection exercises. Geographic remoteness, security and transportation issues can make in-person interviews expensive and impractical.

In addition, the COVID-19 pandemic made travelling to and within the region virtually impossible at the time of the survey. These factors made it unrealistic to proceed with face-to-face interviews in most countries.

We therefore chose the CATI methodology, despite the relatively low phone penetration reported in some countries and the absence of reliable and updated statistics on phone penetration. Given anecdotal evidence that while individual mobile phone penetration might be low in some of these countries, many households have at least one mobile phone, the survey methodology was adapted to capture information about mobile phone penetration within households, and an additional stratum introduced to include representation from adults without a mobile phone.

Sample sizes

For the two countries with the largest populations in the region, Papua New Guinea and Fiji, the sample size was set at 1,000 respondents. While the target population were all adults, some regions or population groups could not be reached.

These include areas in Kiribati (Kanton, Kiritimati, Tabuaeran, Teeraina), New Caledonia (Belep) and specific sectors of the population in Fiji (women in the Rotuma group) and Tonga (the Ha'apai group and women in the Ongo Niua region). The size of the excluded groups ranges from 0.1 per cent of the total adult population in Fiji to 8 per cent of the population in Kiribati.

Weighting

The survey results were post-weighted to align them with national statistics and correct for some deviations found in the classification variables. A weighting factor was calculated on the basis of national census data for region, age and gender. A weighting matrix was assembled using the variables “region by gender” and “gender by age”. Ninety-three per cent of all cases have an individual weight factor between 0.7 and 1.3, and fewer than 0.5 per cent have a weight value above 2, with no cap for outliers. The overall weighting efficiency (entire sample of all countries) is 94.75, with a mean weight factor of 0.9999998.

Margin of error

The efficiency of the result is subject to the sample size and the observed percentage. The maximum margin of error due to sampling from the entire population for a result of 50 per cent, with a confidence interval of 95 per cent, varies from 3.1 per cent in countries with a sample of 1,000 respondents to 4.4 per cent in countries with a sample of 500 interviews. The following table summarises information related to the fieldwork execution, sample size, coverage and accuracy of the samples.

Regional averages

Unless otherwise stated, for reported multi-country averages, an additional weighting factor is applied so that the sample sizes for each country are equal. The overall results for the region are equivalent to an average of the 10 countries surveyed.

5 Question: How much of a problem, if at all, is corruption in the government in this country? Response options: "No problem at all", "Fairly small", "Fairly big" or "A very big problem". Base: All respondents, excluding missing answers. The

results shown combine the response options "Fairly big" and "A very big problem".

6 Question: How often do you think the following situations happen in this country: A public servant influencing a hiring decision in their department to favour a friend or a family member. Response options: "Never", "Rarely", "Occasionally", "Frequently", "Very Frequently". Base: All respondents, excluding missing answers. The results shown combine the response options "Frequently" and "Very frequently".

7 Question: How much of a problem, if at all, is corruption in the business sector in this country? Response options: "No problem at all", "Fairly small", "Fairly big" or "A very big problem". Base: All respondents, excluding missing answers. The results shown combine the response options "Fairly big" and "A very big problem".

8 Question: How often do you think the following situations happen in this country: Companies using money or connections to secure profitable government contracts. Response options: "Never", "Rarely", "Occasionally", "Frequently", "Very Frequently". Base: All respondents, excluding missing answers. The results shown combine the response options "Occasionally", "Frequently" and "Very Frequently".

9 Question: How often do you think the following situations happen in this country: The government in (this country) is pretty much run by a few big interests looking out for themselves. Response options: "Never", "Rarely", "Occasionally",

"Frequently", "Very Frequently". Base: All respondents, excluding missing answers. The results shown combine the response options "Frequently" and "Very frequently".

10 Question: Please tell me whether you strongly disagree, tend to disagree, neither agree nor disagree, tend to agree or strongly agree with the following statement: There is little control over those who exploit our natural resources. Response options: "Strongly disagree", "Tend to disagree", "Neither agree nor disagree", "Tend to agree" or "Strongly agree". Base: All respondents, excluding missing answers. The results shown combine the response options "Tend to agree" and "Strongly agree".

19 Question: Over the past year, in your opinion, has the level of corruption in government in the country decreased a lot, somewhat decreased, stayed the same, somewhat increased or increased a lot? Response options: "Decreased a lot", "Somewhat decreased", "Stayed the same", "Somewhat increased" and "Increased a lot". Base: All respondents, excluding missing answers. The results shown combine the response options "Somewhat increased" and "Increased a lot" into a single category.

20 Question: Over the past year, in your opinion, has the level of corruption in the business sector in the country decreased a lot, somewhat decreased, stayed the same, somewhat increased or increased a lot? Response options: "Decreased a lot", "Somewhat

decreased", "Stayed the same", "Somewhat increased" and "Increased a lot". Base: All respondents, excluding missing answers. The results shown combine the response options "Somewhat increased" and "Increased a lot" into a single category.

29 The president's office was considered the Head of Government in French Polynesia, the Federal States of Micronesia, Kiribati and New Caledonia. For all other countries, the question reflects the results for the prime minister's office.

30 Question: How many of the following people do you think are involved in corruption or haven't you heard enough about them to say: 1)

The president / prime minister and officials in his/her office 2) Members of parliament 3) Public servants 4) Local government including mayors 5) The police 6) Judges and magistrates 7) Religious leaders 8) Business executives 9) Civil society organisations 10) Bankers 11) Army leaders 12) Companies extracting natural resources 13) Community leaders. Response options: “None”, “Some of them”, “Most of them”, “All of them”. The question on army leaders was only asked in countries with military forces. Base: All respondents, excluding missing answers. The results shown combine the response options “Most of them” and “All of them” into a single category.

36 Ibid.

37 Question: We would like to know how much trust and confidence you have in the following institutions to do a good job in the country and act in a fair manner whilst carrying out their responsibilities: 1) The government (including politicians, public servants or any kind of government agency) 2) The courts 3) The police 4) Business that provides services for the government 5) The army 6) The banks 7) Religious institutions 8) Civil society organisations 9) Kastom / Whanau / Family / Wider family. Response options: “No trust at all”, “Not very much trust”, “A fair amount of trust”, “A great deal of trust”. The question on trust in the army was only asked in countries with a military. Base: All respondents, excluding missing answers. The results shown combine the response options “A great deal of trust” and “A fair amount of trust” into a single category.

38 Question: Can you tell me if in the last 12 months you had any contact with: 1) A public school 2) A public clinic or hospital 3) A government office to get a document you needed 4) Government service providers to get water, sanitation or electric services 5) The police 6) The courts. Response options: “Yes”, “No”. Base: All respondents, excluding missing answers.

39 Question: Taking into consideration the public services that you have contacted in the last 12

months, how often, if ever, did you have to pay a bribe, give a gift or do a favour in order to get the assistance or services you needed from: 1) a public school 2) a public clinic or hospital 3) a government office to get the document you needed 4) government service providers to get water, sanitation or electric services 5) the police 6) the courts? Response options: “Never”, “Once or twice”, “A few times”, “Often”. Base: All respondents who had contact with the relevant public services. The bribery rates consider all respondents with contact who paid a bribe at least once.

40 Due to low contact rates with the court system, the bribery rates obtained for this sector were not deemed representative and are thus not reported separately. These experiences were considered for the calculation of the overall bribery rates.

41 Question: Thinking about the last time that you paid a bribe, gave a gift, or did a favour to get a public service, did you report the incident to the relevant authorities? Response options: “Yes”, “No”. Base: Respondents who had contact with the relevant public service who also reported paying a bribe at least once.

51 Question: Taking into

consideration the public services that you have contacted in the last 12 months, how often, if ever, did you have to use personal connections or call in favours to get the services you needed from: 1) a public school 2) a public clinic or hospital 3) a government office to get the document you needed 4) government service providers to get water, sanitation or electric services 5) the police 6) the courts? Response options: "Never", "Once or twice", "A few times", "Often". Base: All respondents who had contact with the relevant public services. The overall use of personal connections is calculated by taking into consideration respondents who relied on this practice at least once.

52 Question: Thinking about the most recent time that you paid a bribe, gave a gift, or did a favour to get a public service, what was your main reason for doing this? Response options: "You were asked to pay", "You were not asked to pay, but knew it was expected", "You offered to pay to get things done quicker", "You offered to pay to get things done better", "You were not asked to pay, but wanted to express your gratitude" (not read out to respondents), "You were afraid that if you did not pay, there would be retaliation" (not read out to respondents). Base: Respondents who had contact with at least one public service who also reported paying a bribe.

53 Question: Thinking about the most recent time that you had to use your personal connections to get a public service, what was your main reason for doing this? Response options: "You would have not received the service without your personal connection", "You wanted to get a quicker service than what is usually offered", "You wanted to get a better service than what is usually offered", "It was a way to help each other"

(not read out to respondents). Base: Respondents who had contact with at least one public service who also reported using personal connections.

54 Albisu Ardigó, I. (2017). 'Corruption in the Service Delivery: Topic Guide.' Transparency International. Available at: <https://knowledgehub.transparency.org/product/topic-guide-on-corruption-in-service-delivery>. Last accessed on 05.11.21.

55 Question: Do you agree or disagree with the following statement: If someone in a position of responsibility helps me, then I feel I should give them a gift or political support to acknowledge this. Response options: "Strongly disagree", "Tend to disagree", "Neither agree nor disagree", "Tend to agree", "Strongly agree". Base: All respondents, excluding missing answers. The results shown combine the response options "Tend to agree" and "Strongly agree".

60 Pacific Women (2020). 'Ending Violence against Women'. Available at: <https://pacificwomen.org/our-work/focus-areas/ending-violence-against-women/>. Last accessed on 21.10.21.

61 Question: Some people experience situations in which public officials make requests of a sexual nature in exchange for a government service or benefits. How often do you think this happens in this country? Response options: "Never", "Rarely", "Occasionally", "Frequently", "Very Frequently". Base: All respondents, excluding missing answers. The results shown combine the response options "Occasionally", "Frequently" and "Very frequently".

62 Question: And thinking about your own experience in the last five years, has it ever happened to you or someone that you know that an official in this country made requests of a sexual nature in exchange for a government service or benefits? Response options: "Never", "Once or twice", "A few times", "Often". Base: All respondents, excluding missing answers. The results show the aggregated results of answer options "Once or twice", "A few times" and "Often".

63 Question: In the past five years, has anyone offered a gift or special favour to other members of your family or clan to vote for a particular candidate at a national, regional or local election? Has that

happened to you? Response options: "Never", "Once or twice", "A few times", "Often". Base: All respondents, excluding missing answers. The results shown combine the response options "Once or twice", "A few times" and "Often".

64 Question: And in the past five years, how many times, if at all, has anyone threatened you with some sort of retaliation if you did not vote in a particular way at a national, regional or local election? Has that happened to you? Response options: "Never", "Once or twice", "A few times", "Often". Base: All respondents, excluding missing answers. The results shown combine the response options "Once or twice", "A few times" and "Often".

65 Question: In the past five years, how many times, if at all, has anyone tried to offer you a bribe or special favour to vote in a particular way at a national, regional or local election? Response options: "Never", "Once or twice", "A few times", "Often". Base: All respondents, excluding missing answers. The results shown combine the response options "Once or twice", "A few times" and "Often".
